PROFESSIONAL SUMMARY

DevOps and cloud engineer with 6 years building and operating production infrastructure on Azure, AWS, and GCP. Founded GTBank Ghana's DevOps practice from scratch - multi-cloud Azure + AWS footprint with private VPC links to on-prem, Terraform + FluxCD GitOps, CI/CD that cut deployment time ~90%, and 800+ pods sustaining 1.5M+ daily transactions at 99.97% uptime. Backend-aware: ships Python (FastAPI, Django, Celery) services as part of platform work, not as a separate skill. Built Virk Cloud, an independent multi-tenant Kubernetes PaaS, end-to-end. Comfortable owning reliability, scalability, and delivery velocity for revenue-ready, secure, enterprise-grade systems.

CORE COMPETENCIES

Azure Cloud Engineering (App Services, AKS, Functions, Key Vault - adjacent via AWS analogues)

Multi-Cloud Infrastructure (Azure, AWS, GCP, OCI)

Infrastructure-as-Code (Terraform, Ansible)

CI/CD and GitOps (Azure DevOps, GitHub Actions, FluxCD, ArgoCD)

Kubernetes Operations at Scale (AKS-adjacent: TKG, EKS, GKE, RKE2)

Backend Enablement (Python, FastAPI, Django, Celery)

Cloud Security and Networking (VPC, IAM, secrets management)

Observability and Incident Response (Prometheus, Grafana, ELK, Sentry)

TECHNICAL SKILLS

Cloud & Infrastructure: Azure, AWS (EKS, ECS, S3, SQS/SNS, VPC), GCP (GKE, Cloud SQL, Cloud Storage), OCI, on-prem bare metal (Tier III data centers)

CI/CD & GitOps: Terraform, Ansible, Azure DevOps, GitHub Actions, FluxCD, ArgoCD, Helm, Codemagic

Container Orchestration: Docker, Docker Compose, Kubernetes (AKS-adjacent: TKG/Tanzu, EKS, GKE, RKE2), Istio Service Mesh

Observability: Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana, Filebeat), Azure Monitor (adjacent), Sentry

Security & Networking: Private VPC peering, IAM, Key Vault / AWS SSM / Secrets Manager, Veracode, Trivy, secure CI/CD gates

Backend: Python (FastAPI, Django, Celery), Node.js (Express), REST APIs, GraphQL, WebSockets

Databases & Messaging: PostgreSQL, MySQL, MongoDB, Redis, Kafka, AWS SQS/SNS, RabbitMQ

Frontend (when needed): TypeScript, React, Next.js, Tailwind CSS

AI & Agents: Claude / OpenAI API integration, RAG systems, AI agent development for ops automation, tool-use patterns

PROFESSIONAL CERTIFICATIONS

AI Engineering Specialization (ByteByteGo), Mar 2026: Agents, RAG, LLM applications

Oracle Kubernetes Engine Specialist (Oracle), Aug 2025

Certified Oracle Cloud Infrastructure DevOps Professional (Oracle), Aug 2025

Oracle Certified Cloud Infrastructure Architect Associate (Oracle), Aug 2025

AWS Certified Cloud Practitioner (AWS), May 2024

Django Web Framework (Coursera), Dec 2022

PROFESSIONAL EXPERIENCE

Guaranty Trust Bank Ghana LTD

Apr 2024 - Present

DevOps Engineering Lead

- Managed multi-cloud infrastructure across Azure and AWS: resource provisioning, private VPC links to on-prem systems, deployments, access control, and cost optimization.
- Implemented CI/CD automation across Azure DevOps and GitHub Actions that cut deployment time by ~90% and increased release velocity ~5x; introduced GitOps with FluxCD for repeatable, idempotent deployments; integrated Veracode and Trivy security scanning into pipelines.
- Founded the bank's DevOps team of 4 engineers and established modern delivery practices, introducing Kubernetes, containerized deployments, disciplined version control, and automated release workflows.
- Architected high-availability Kubernetes clusters running internal applications handling 3M+ daily requests with 99.97% uptime; implemented auto-scaling and self-healing.
- Automated 95% of infrastructure configuration management using Terraform, Ansible, Python, and Bash, turning multi-day manual processes into reproducible, version-controlled deployments in minutes.
- Stood up unified observability stack (Prometheus, Grafana, Elastic Stack, Sentry) for centralized logging, tracing, and real-time alerting to accelerate RCA.

Guaranty Trust Bank Ghana LTD

May 2025 - Present

Team Lead, Core Banking Services

- Own the on-prem Finacle deployment on Tanzu Kubernetes Grid (AKS-equivalent managed K8s), managing 800+ production pods sustaining 1.5M+ daily transactions.
- Built a bank-wide OTP service (Next.js + Django + Celery + Redis), integrating SMS and email gateways, securing core banking access for 600+ internal users with structured logging to Elasticsearch via Filebeat.
- Built an identity verification service using Python/FastAPI-equivalent (Django + Celery), Redis, and self-hosted MinIO document storage with automated customer record updates.
- Lead L2 support operations, leveraging Elastic Stack to correlate logs across internal apps and core banking microservices for root-cause analysis.
- Architected integrations between Finacle core banking and third-party systems including transaction portals and internal tools.

MYHEALTHCOP LTD

Jan 2021 - Mar 2024

Chief Technical Officer (Founding)

- Designed secure, cost-efficient AWS infrastructure running containerized microservices on EKS and ECS with autoscaling, load balancing, and secure inter-service communication via VPCs and IAM policies.
- Automated application delivery and infrastructure provisioning via CI/CD on GitHub Actions and Terraform, making deployments repeatable, auditable, and reversible.
- Built a high-throughput background processing system handling 1M+ daily jobs across payments, messaging, and notifications using SQS/SNS with multi-provider failover.
- Designed a disaster recovery strategy mirroring the AWS production environment on GCP using GKE, Cloud SQL, and Cloud Storage, with secure VPCs, IAM policies, and dual-environment CI/CD for rapid failover.
- Led performance optimizations that reduced peak request latency by 90% through Redis caching, query tuning, and PostgreSQL indexing.
- Led a 12-person cross-functional team (frontend, backend, mobile, product, design, QA) under Agile/Scrum, directly client-facing across product cycles.

PROJECTS

Virk Cloud (virk.cloud)

Aug 2025

Founder & CTO

- Architected and operate a production-grade multi-tenant Kubernetes PaaS (Vercel-style) with built-in CI/CD, observability, real-time log streaming, and fixed billing.
- Manage full infrastructure on virtual private servers: RKE2 cluster deployment, FluxCD-driven tenant onboarding, hardware and storage provisioning, network/traffic management, DNS.
- Built the management console in Next.js with authentication, cluster management, real-time monitoring dashboards, and billing - deployed onto the platform itself.

Stack: Kubernetes (RKE2), FluxCD, Terraform, Prometheus, Grafana, Next.js, TypeScript, Convex

Digital-Recon: Transaction Reconciliation Engine

2025 - Present

Founder

- Built a real-time event-driven transaction reconciliation engine for financial institutions, detecting discrepancies across heterogeneous data sources (relational DBs, REST APIs, Elasticsearch, Kafka topics).
- Architected an event-driven processing layer using Kafka for upstream ingestion and Celery for scheduled and on-demand reconciliation jobs, with windowed scans, per-source reprocessing, and downstream alerting.
- Deployed on Docker with PostgreSQL and Elasticsearch backends; designed for serverless-style horizontal scale-out per workload.

Stack: Python, Celery, Kafka, Elasticsearch, PostgreSQL, Docker, Next.js, TypeScript

AI Agents for Infrastructure Operations

2024 - Present

Personal R&D

- Building production-shaped AI agents for QA automation, code review, and sysadmin operations against real Linux and Kubernetes systems, using Claude API with tool-use, dry-run mode, and human escalation gates.
- Applying agent-driven patterns (RAG, tool-use, multi-agent orchestration) to support AI/ML workloads in production-adjacent contexts.
- Completed AI Engineering Specialization (ByteByteGo) covering agents, RAG, and LLM application development.

EDUCATION

Ashesi University - BSc Computer Engineering

Sep 2016 - May 2020

Berekuso, Ghana
